(Current Biology 29, 541–553.e1–e7; February 18, 2019)

In the original version of the article's Supplemental Information, the cell values of Table S4 were erroneously duplicated from Table S2. The marginal means of Table S4 correctly represented the data but did not represent the cell values of the table. This error and a small typographical error (missing word "potential" in "event-related potential") in the description of Table S6 have been corrected online.

The error in Table S4 has no impact on the main results or conclusions of this publication. All statistics and analyses were based on the correct raw data, not on the values as seen in the table. Interpretations of the results pertained to the marginal means, which were correctly represented in Table S4.

The authors thank an astute reader for bringing the error in Table S4 to their attention and apologize for the errors.
